

IN THE SPECIFICATION:

The paragraph beginning at page 6, line 5 has been rewritten as follows:

C1
-- Fig. 1 shows a prior art internet remote video monitoring application where a user 10 of a personal computer (PC) 12 can access the internet 14 via a modem 18 and a local internet service provider (ISP) 18. Another service provider 20 is connected via a router 22 and a hub 24 to a plurality of video servers 26, ..., 28 which are in turn connected to a plurality of video cameras 30, ..., 32. The cameras can be located in different parts of an industrial plant such as the factory 34 and the warehouse 36. In this way the user 10 can monitor various parts of the plant remotely. It is even possible to remotely control the cameras, e.g., by controlling their lenses 38, 40 to zoom in and out. It should be realized, however, that the camera or cameras can be located anywhere and that the internet 14 can be any kind of connection or connections provided that bidirectionality is provided.--

The paragraph beginning at page 15, line 16 has been rewritten as follows:

C2
-- A conventional display 128 responsive to a signal on a line 130 from an interface 132 can be used instead of the HMD 56 or the device such as shown in U.S. Patent No. 5,436,638. An attitude sensor or a conventional input device such as a mouse, joystick or the like 134 can be used, or a sensor such as shown in U.S. Patent No. 5,436,638, to provide an upstream control signal on a line 136 to the interface 132. The interface 132 interchanges a bidirectional signal on a media line 138 with a wideband internet service provider 140 connected to the internet 76 by a line 142.--

IN THE CLAIMS:

Please add new claims 21-31 as follows:

C3 sub F1
21. A display device (163), comprising:
a display (164) mounted on a first platform part (180) rotatable (168) about a first (z-) axis (170); and
a second platform part (185) within which said first platform part is rotatably mounted for rotation about a second (x-) axis (190).

22. The device of claim 21, further comprising:
a third platform part (198) within which said second platform part is rotatably mounted for rotation about a third (y-) axis (200).
